Introduction

1.1. Preface

Thank you for purchasing of our CAS scale.

This scale has been designed with CAS reliability, under rigid quality control and with outstanding performance.

We hope that your departments enjoy with high quality of CAS product.

This manual will help you with proper operations and care of the ER series.

Please keep it handy for the future references.

1.2. Precaution

- Make sure that you plug your scale into the proper power outlet.
- Place the scale on a flat and stable surface.
- Plug into a power outlet 30 minutes before operations.
- Keep the scale away from strong EMI noises may cause incorrect weight readings.
- This scale must be installed in a dry and liquid free environment.
- Do not subject the scale to sudden temperature changes.
- Do not subject the platter to sudden shocks.
- If the scale is not properly level, please adjust the 4 legs at the bottom of the scale (turn legs clockwise or counterclockwise) so as to center the bubble of the leveling gauge inside the indicated circle.

2.1. General Calibration

Hold down "Calibration Switch" and "[POWER] key" to enter Calibration mode and then the scale displays "CAL 1" after "onE".

User can move to other menu by using [ZERO] key (Next) or [-] key (Previous).

User can also enter the sub-menus in each mode by using [TARE] key.

If you want to escape from the selected mode, Press the [C] key.

To confirm the modified setting, press the [TARE] key.

2.1.1.C4 Setting

ER^{PLUS} stores optional settings by using hexadecimal number in C-4 menu. When you entered CAL-4, it will display hexadecimal number on the Total Price Display panel. For example, it displays B0 in C41 setting. $B0_{(16)}$ represents $10110000_{(2)}$ in the binary system. It means that scale has been set by (+/-)10% zero range, last digit invalid enable, (+/-)2% key zero percent, proper successive tare type and gross zero indication settings. Please refer to below table.

2.1.2. SPAN Calibration Setting (C-3) * Set the CAL-10 setting first.

- (1) Hold down "Calibration Switch" and "[POWER] key" to enter Calibration mode.
- (2) Then, the scale displays "CAL 1" message after "ONE" message.
- (3) Press [ZERO] key two times to display "CAL-3".
- (4) Press [TARE] key and then it displays "zero" message.
- (5) Press [TARE] key and then it displays "midup" message
- (6) Load middle weight (ex:1/3 of full capacity) on the platform
- (7) Press [TARE] key and then it displays "FULL" message
- (8) Load full weight on the platform
- (9) Press [TARE] key and then it displays "middn" message
- (10) Load middle weight (ex:1/3 of full capacity) on the platform
- (11) Press [TARE] key and then it display "CAL 3" message
- * ER^{PLUS} uses 3 points calibration to weigh precisely. However, if you want to use 1 point calibration, set mid-value as "0" in "CAL-10" setting.

2.1.3. Gravity Constant Value Setting (C-9)

Current gravitational Acceleration value is set to 9.7946 m/s².

- (1) Hold down "Calibration Switch" and "[POWER] key" to enter Calibration mode.
- (2) Then, the scale "CAL 1" message after "ONE" message.
- (3) Press [ZERO] to display "C-9".
- (4) Press [TARE] key, and then "G-1" message and "9.7946" will be shown. G-1 means Gravity constant value at the location that the span of scale has been calibrated.
- (5) Input a gravitational acceleration value by keypad and press [TARE] key to set.
- (6) And then "G-2" message and "9.7946" will be shown. G-2 means Gravity constant value in the location that the scale will be used. In this case, G-2 value is not modified yet.
- (7) Input a gravitational acceleration value by keypad.
- (8) Press [TARE] key to save the gravitational acceleration value, and then "C-9" message will be shown. It indicates
- (9) In addition, ER Plus will set G-1 value to G-2 value automatically when you recalibrate at the new place. Therefore, just set the G-1 value before calibrating the scale.

2.1.4. Calibration factor Setting (C-10) * Refer to CAL-10 Table.

- (1) Hold down "Calibration Switch" and "[POWER] key" to enter Calibration mode.
- (2) Then, the scale displays "CAL 1" message after "ONE" message.
- (3) Press [ZERO] to display "C-10".
- (4) Press [TARE] key, and then "UNIT" message and "0" will be shown. The first digit, "0" It means calibration unit is "kg" (0: kg, 1: lb)
- (5) Input a calibration unit by using keypad.

- (6) Press [TARE] key to set the value, and then the scale displays "CAPA" and "15". It means that full-capability is "15 (calibration unit, kg or lb)"
- (7) Input a capability by using [TARE] key.
- (8) And then "mid" message is displayed. "5" will be shown. It means that mid-capability is "5 (calibration unit, kg or lb)"
- (9) Input a mid-capability by using keypad.
- (10) Press [TARE] key, and then "W-dP "message and "3" will be shown. It means that weight decimal point is "3 (will display 0.000)"
- (11) Input a weight decimal point by keypad.
- (12) Press [TARE] key, and then "1d " message and "0.005" will be shown. It means that the one division is "0.005 (calibration unit, kg or lb)"
- (13) Input an one division by using keypad.
- (14) Press [TARE] key, and then "dual" message and "1" will be shown. It means that dual interval is enabled. (0: disable, 1: enable)"
- (15) Input a dual interval setting by using keypad.
- (16) Press [TARE] key, and then "tare" message and "0" will be shown. You can **enable or** disable custom tare (0:disable, 1:enable)
- (17) Press [TARE] key to save calibration factor and then "C-10" message will be shown. Add to this you can browse any menu to reset value by using [ZERO]key and [-] key in the C-10 Mode.

2.1.7. Percent Calibration (C-7)

- (1) Hold down "Calibration Switch" and "[POWER] key" to enter Calibration mode.
- (2) Then, the scale displays "CAL 1" message after "ONE" message.
- (3) Press [ZERO] key to display "CAL-7".
- (4) Press [TARE] key and then it displays "per 10" message. Select the percent value using numerical keypad. You can choose 10~90 percent.
- (5) Press [TARE] key and then it displays "zero" message
- (6) Press [TARE] key and then it displays "pspan" message
- (7) Load chosen percentage weight of full weight on the platform
- (8) Press [TARE] key and then it displays "CAL 7" message

2.1.8. Battery Calibration (C-8)

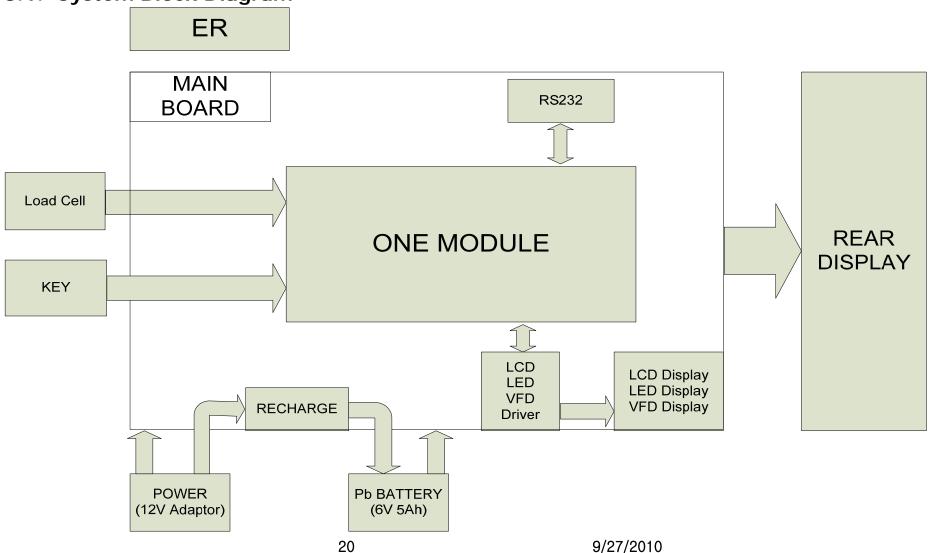

- (1) Hold down "Calibration Switch" and "[POWER] key" to enter Calibration mode.
- (2) Then, the scale displays "CAL 1" message after "ONE" message.
- (3) Press [ZERO] key to display "CAL-8".
- (4) Press [TARE] key and then it displays voltage of battery.
- (5) Change the jumper-pin of main PCB, 'BAT' to '+5V'.
- (6) Press [ZERO] key two times and then Press [-] key two times.

 And then it displays '500'
- (7) Change the jumper-pin of main PCB, '+5V' to 'BAT'.
- (8) You can see the calibrated voltage of battery.

7. Error Messages & Solution

Error Message on Display	Description	Solution
"Err 0"	The "Err 0" occurs when scale is not stable.	Remove unstable facts.
"Err 1"	The "Err 1" occurs when a current zero point has shifted from the last span calibration.	Please call your CAS dealer.
"Err 2"	The "Err 2" is not a real error. Only it prompts return CAL switch to the normal position.	Please call your CAS dealer.
"Err 3"	The "Err 3" is an overload error.	Please remove the weight.
"Err 4"	The "Err 4" is leakage of payment.	Scale needs more payment.
"Err 5"	The "Err 5" means there is already tare.	Remove the tare.
"Err 6"	The "Err 6" means total price summation is over.	Please change unit price or remove some weight.
"Err 7"	The "Err 7" means total price is over.	Please change unit price or remove some weight.
"Err 8"	The "Err 8" means Euro rating price is over.	Please change unit price or change euro rate.
"Err 11"	The "Err 11" means a writing error of the internal nonvolatile memory. To recognize this error, be sure to check the voltage on the circuit and do calibration procedures.	If it still has "Err 11", replace the digital module.
"Err 12"	The "Err 12" warns that the scale has lost the parameters for weighing regulations or has lost the factors for a digital span calculation.	Enter each condition codes again. Please try a span calibration again if still not fixed.
"Err 13"	The "Err 13" means the soft key code is broken.	Please try to find out which key lost soft key code and then input this code again.
"Err 14"	The "Err 14" means calibration range is not correct.	Please call your CAS dealer.
"Err 15"	The "Err 15" means 1/2 or 1/4 unit price is over.	Please change unit price
